Fetal Therapy: When Few Medical Devices Are Made for these Patients

As recently as 2106, the FDA recognized that “Despite a recognized need, relatively few medical devices have pediatric-specific indications and labeling.” Far fewer have fetal-specific indications. Dr. Baschat is a leader in adopting and modifying approved medical devices for use in treating his patients. He will discuss the needs for this special population and the approaches and challenges of effectively using tools that are available.

Ahmet Baschat, M.D. His areas of clinical expertise include prenatal diagnosis and therapy of a wide range of fetal conditions including congenital diaphragmatic hernia, intrauterine growth restriction, and twin-to-twin transfusion syndrome. Dr. Baschat received his undergraduate and medical degrees from The Royal College of Surgeons in Ireland. He earned his Dr. Med from the University of Lübeck.
